

An  
Unparalleled  
Research Tool  
in the  
Mathematical  
Sciences  
Comes to the  
World Wide Web

# MATHSCINET

*Coming in January '96*

# SINCE 1940 . . .

researchers have turned  
to Mathematical Reviews and  
Current Mathematical  
Publications for timely reviews  
and bibliographic entries of papers  
and books published worldwide.

# NOW,

thanks to the technology of the  
World Wide Web on the Internet,  
your MR database search is easier  
and more productive than ever  
before.

We call it MathSciNet,  
and it's accessible through e-MATH,  
our Internet connection  
to the mathematics community.

# **MATHSCINET IS AS SIMPLE AS POINT AND CLICK!**

That's all you have to do to follow a  
hypertext link.

- click to jump to other reviews cited in the  
on-screen review
- click to jump to other reviews which cite  
the on-screen item
- click to get a list of other works by that author
- click to get full journal information
- click to get the table of contents
- click to get an author's current address from  
the Combined Membership List

# **YOUR MATHSCINET SEARCH IS TIMELY AND ACCURATE.**

Your searches are especially current because  
MathSciNet features daily updates. Also, a  
variety of file formats (DVI, PostScript, Acrobat,  
BibTeX) will allow you to see true mathematical  
symbols on-screen and add information to your  
personal bibliographic database. Another  
exciting feature of MathSciNet is something  
called author identification. A MathSciNet  
search locates items with all variations of a  
particular author's name—particularly effective

for differentiating among similar names.

Together, these features make MathSciNet the most productive MR database product yet!

## **TEST MATHSCINET FOR FREE.**

See for yourself how MathSciNet simplifies and enhances your access to the MR database. Free sample searches produce up to seven items for any author. If you have a World Wide Web browser, you can access MathSciNet on e-MATH at the address

**<http://www.ams.org/mathscinet/>**

If you do not have a Web browser, type

**telnet e-math.ams.org**

login and password are both

**e-math** (lower case)

and select the World Wide Web option.

## **MATHSCINET SUBSCRIPTIONS**

MathSciNet pricing is based on two components: an annual Data Access Fee and an annual Product Delivery Fee. The MathSciNet Product Delivery Fee allows unlimited access by all users at your site.
